Build Future Skills Radar
Task Board
The radar is working with verified counts, 30 occupations, three views, and role-specific pathways. Automated checks passed for evidence safeguards, vector validation, fixed rectangle areas, and unchanged legacy scores. Browser checks confirmed consent-controlled requests, stale-result cancellation, mobile layout, and no new matching requests when exploring layers or roles.
Two approval-dependent items remain clearly pending: live RunPod testing and human review of exposure ratings. The setup guide proposes E5-small on one small flex worker, explains costs and shutdown, and includes short understanding checks. Nothing paid has been provisioned or deployed.

Marked task #4 (Build Future Skills Radar) complete
Implemented Future Skills Radar in the existing report.
Verified DOSM counts across five groups and 30 MASCO-mapped occupations.
Demand, AI-exposure and SDG views with fixed rectangle sizes.
Evidence-labelled skill matches, role-specific gaps and selected-role pathways.
Synthetic-only consent, safe keyword fallback and request cancellation.
Existing readiness and scenario formulas preserved.
Validation passed. RunPod activation and human approval of exposure ratings remain pending. No paid infrastructure or production deployment occurred.
Setup, cost controls and shutdown instructions are in docs/radar-operator-guide.md.

PRIVATE PROTOTYPE · MALAYSIA
A KINDER KIND OF CAREER REALITY CHECK
Less scorecard.
More next step.
A blunt-but-kind CV coach for Malaysian fresh grads. See what your CV already proves, where the gaps are, and one practical move to make next.
Local review. Image OCR only with consent.
Your own real CV or a fictional CV can be reviewed in this browser. Selectable PDF text stays local. Images and scanned pages go to this app's CPU OCR worker only after separate permission; never to RunPod. Optional server radar is for explicitly confirmed fictional text only, not imported documents.
START HERE
01 / INPUT
Bring your CV.
Paste text or import PDF, PNG or JPEG. Up to 10 MB, 10 PDF pages and 12,000 editor characters. Images: 4 million pixels, 4,000 per side; PDF scans: 20 million pixels total.
Your own CV is welcome for local review. Imported documents never go to external radar processing. Check OCR text before reviewing.
SYNTHETIC SAMPLE — AINA
Fictional candidate, Malaysia | aina@example.com
PROFILE
Business Analytics graduate from Universiti Malaya (CGPA 3.62). Curious, practical analyst who enjoys turning messy information into useful decisions. Seeking an entry-level data or business analyst role.
